Netherland - Amsterdam

I am an experienced web developer. During my programming journey, I have faced many challenges and problems in my field of work, from which I have been able to learn many lessons. Experienced in designing, implementing, maintaining, testing and debugging corporate and commercial websites.

EXPERIENCE

Web Developer

Digital Society School

February 2023 - June 2023, Amsterdam

- Project client: Global Goals Jam
 - Designing and implementing an online platform to improve communication between the members of this community and to document all the activities of this community by the members themselves.
- Role: full stack developer
- In Digital Society School, I am responsible for building a new platform and I am taking feedback from users using online survey forms, and I apply these feedbacks on the new platform. I have coded the front and back end of this platform myself.

Web Developer

E-estehkdam

December 2020 - Jun 2022, Tehran

- Development, testing, and fixing bugs for Iran's largest online hiring service.
- Role: full stack developer
- The company's website needed updating and they needed to expand their team.
- I was in charge of the employer department, and based on the feedback I received from employers via email and a tool like Hotjar, I developed the employer department so that the employer could easily set up an interview and read the resume of job seekers.
- This website was designed with React js and the old version of cakephp and we updated it to the new version.

Web Developer

Parvaz sefid poshan

July 2018 - February 2020, Tehran

- Implemented Amadeus API and domestic flights to sell airline tickets.
- Implementation of hotel reservation system using API.
- Maintenance and updating of the systems mentioned above.

Role: backend developer

- This company had bought a lot of APIs from domestic airlines and Amadeus company, as well as APIs for hotel reservations in Iran.
- My task was to implement all these APIs on the company's website, and when a customer searched for a specific flight route, by sending a request to these APIs, we would show the customer all the airline tickets that were available on this route. Through the hotel API, we would show the list of hotels available in a city to the customer and book any hotel and room he wanted through the API.
- I had implemented this using codeigniter.

Web Developer

Ghasedaksoft

September 2015 - March 2018, Qazvin

- Design and implementation of store and personal websites.

role: full stack developer

1- I have designed the website of Kade Lab company.

(<https://kade-lab.com/>)

2- I have designed a personal website

(<http://neelodesign.com/>)

- Designing and implementing web based software for (Qazvin Construction Engineering Organization) to automate administrative processes.

Role: full stack developer

-In this organization, all the work processes were done using paper, and it was expensive to do these things and maintain them. They needed all the processes of the organization to be done online.

First, for three months, I had three meetings a week with one of the managers of the organization. We defined all the processes and responsibilities of the organization and prioritized them. After that, I started to implement the desired platform of the organization based on processes and responsibilities.

I implemented this platform using laravel, bootstrap and jquery.

Programming languages

HTML/CSS

JavaScript

PHP

Frameworks

HTML/CSS (Bootstrap)

JavaScript (NodeJS,

ReactJS, jQuery)

PHP (Laravel, Codeigniter,

CakePHP)

Databases

SQL (MySQL, SQLite)

Utilities

Git, Linux, Elastic Search,

SEO, Scrum
